About

AgileNDT is a modern software platform purpose-built for NDT service providers and asset owners. Founded in 2012, we specialize in secure, cloud-based solutions that streamline inspection workflows, standardize reporting across vendors, and ensure audit-readiness in the most regulated industries.

With over a decade of experience supporting clients in the oil & gas, energy, and aerospace sectors, AgileNDT continues to evolve in response to growing expectations around data security, compliance, and digital integration.

Our platform is used by inspection companies and asset operators across Europe, North & South America and Africa—including engagements involving cross-border data management and third-party vendor coordination.

Core Platform Capabilities

Tailored Software. Consistent Standards. Complete Control.

AgileNDT is more than a platform—it's your platform. Every instance is a fully customizable, single-tenant solution built around your inspection methods, documentation standards, approval workflows, and operational structure.

Custom-Built Reporting Frameworks

No rigid templates. We work with your team to model reports around your exact procedures, terminology, and approval logic. Each report type is configured to your specification, with report structures and media fields tailored to fit.

Workflow Automation You Define

Work requests, inspection assignments, approvals, and archiving rules that reflect your processes—not ours. AgileNDT digitizes your actual workflow, with fully configurable triggers, role paths, and approval levels. Nothing generic. Nothing wasted.

Role-Based Portals, Custom Roles

From field techs and Level II inspectors to subcontractors, asset owners, and QA leads—every user type gets a portal that matches their needs. Custom dashboards, access scopes, and privileges are defined per role. You decide what users can see and do.

Secure Distribution That Fits Your Protocol

Distribute reports through encrypted links, protected PDFs, or gated portals—each with your own branding and access policies. Add QR verification, timed links, or external stakeholder views depending on your compliance model.

Integration on Your Terms

Whether it's SAP, Maximo, Excel, or a homegrown database—AgileNDT connects via custom middleware tailored to your data format and security model. Your inspection data flows in and out of the platform exactly how you need it—for billing, analytics, or digital syncing.

"Quality NDT have used Agile NDT since 2018 and expanded our template portfolio each year since. From our humble beginning of around a thousand reports in the start, 2024 gave us 16,000 reports generated with no issue and good technical support."

Even Wiik
COO Quality NDT AS

"This product is built by NDT professionals who know and understand how ineffective and inefficient reporting systems can erode the bottom line. By providing a cloud based application tool which is easily accessible and simple to use, service providers can benefit from their investment in Agile NDT by streamlining their business processes."

Irvine Gilbert
Manager Specialist NDT

"The Agile NDT system is by far the best reporting system that I have used. I am comforted by the fact that my reports are safely stored on a secured server and that I am able to access them easily. I like the fact that I am able to view and compile reports on my mobile, and the report colour scheme for the different NDT methods are quite handy too."

Morgan Willard
Supervisor SGS

Why Choose AgileNDT

Feature	What You Get	Why It Matters
Single-Tenant Model	Dedicated cloud or on-prem instance	Maximum data control and isolation - your instance, your rules
Fully Custom Reporting	Built around your methods & codes	Faster onboarding, easier compliance
Secure Report Delivery	QR-verified links, portals, watermarking	Prevent leaks and unauthorized sharing
Audit-Ready Logs	Time-stamped approvals & immutable history	ISO/API/Client audits with confidence
Vendor Unification	Same platform for all service providers	Consistent quality & real-time visibility
QR-Secured Report Delivery	Encrypted, tamper-evident PDFs or portal access with optional QR verification	Prevents unauthorized access and builds client trust
Approval Chains & Digital Sign-Offs	Configurable approval levels and audit trails	Ensures reports are reviewed and traceable—crucial for ISO/API audits
Equipment & Calibration Tracking	Status, location, and due dates managed in-system	Keeps tools compliant and avoids invalid inspections
Analytics & Dashboards	Report insights by site, vendor, status or method	Identify trends and hotspots across assets and teams instantly
Integrated Billing & Invoicing	Pull data directly from reports to generate invoices	Zero re-keying. Faster billing cycles. Fewer admin errors
Deployment Options	Cloud-hosted or on premise installations	Custom and tailored to you IT and security requirements
